

GPGON - end to end email encryption with GPG

Quick setup guide

What you need:

1. GPG on Linux or gpg4win installed on Windows
2. Python3 configured and working on your operating system
3. Mailbox that allows application connection (Gmail works!)
4. Run `python gpgon.py` in terminal/cmd

Steps to set up gmail secure connection

STEP 1: Click manage account in Gmail main view:

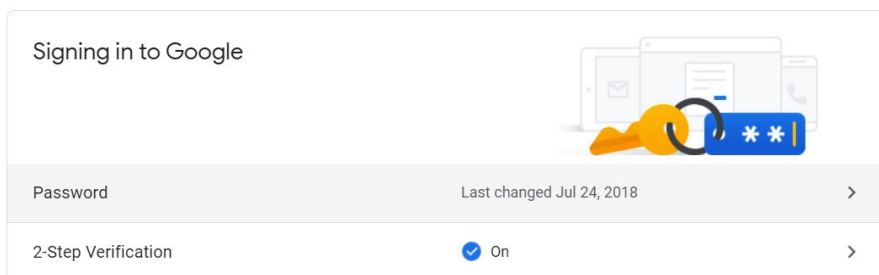

Manage your Google Account

STEP 2: Click Security tab:

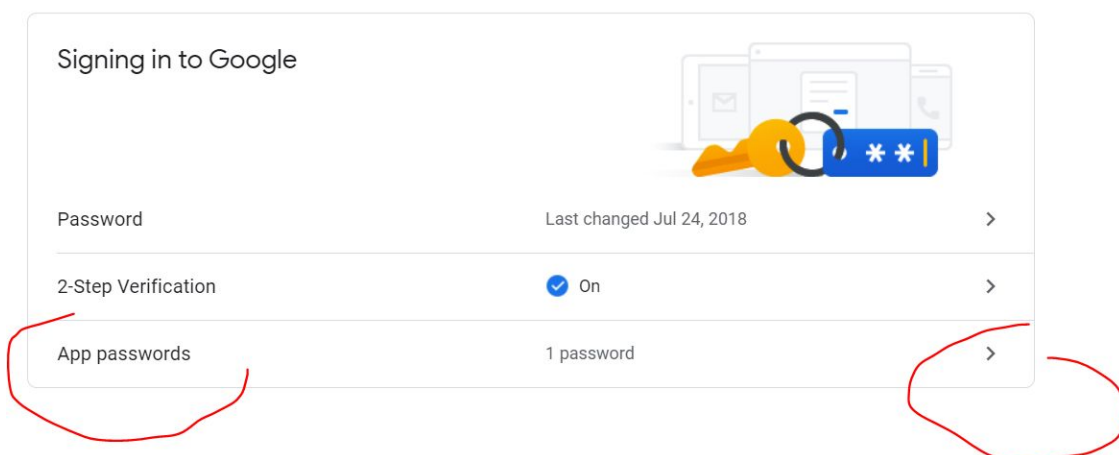

Security

STEP 3: Configure 2-step verification

STEP 4: Generate app password (best enter custom app name):

Generated password will be used to access your mailbox through the app INSTEAD of your regular password!
